

SKYPE FOR BUSINESS ACCELERATION WITH ARYAKA GLOBAL SD-WAN

Deliver stable, consistent, and reliable performance for your video conferencing applications across the globe in hours

- **Zero disconnects:** Receive stable and consistent performance with Skype for Business for end-users around the world
- **Up to 70% savings in executive and employee travel costs:** Conduct high performance video conferencing and reduce the need to travel globally
- **Deployment in hours:** Gain greater reliability worldwide within 8-48 hours.
- **Avoid multiple connection costs:** Utilize one single connection into the Microsoft ecosystem to provide global connectivity for all remote geographies, including China.

Aryaka Supports Microsoft ExpressRoute

Aryaka has partnered with Microsoft to support ExpressRoute connections through its global private network and managed global SD-WAN service. Skype for Business users gain greater reliability, faster speeds, lower latencies, and higher security, because ExpressRoute connections run over Aryaka's private network.

WHY USE ARYAKA FOR SKYPE FOR BUSINESS?

Skype for Business enables global enterprises to collaborate with employees and partners anywhere in the world, on any device. However, connectivity over the public Internet causes performance issues, such as poor voice quality and frequent disconnects.

Aryaka's Skype for Business Acceleration solution bypasses the public Internet with an enterprise-grade global private network and built-in WAN optimization.

End-users can experience LAN-like performance for voice and video conferencing over Skype, even when accessed over long distances and across oceans.

Aryaka delivers MPLS-quality performance over your existing Internet connection.

It's Time to Replace Your MPLS
